ABSTRACT

the use of 2,5invention relates to present dihydroxybenzenesulfonic compounds for the manufacture of a medicament for the regulation of nitric oxide (NO) synthesis (Endothelium-Derivedregulation of EDHF the Hyperpolarizing-Factor) in the endothelium of diabetic patients, whereby the medicament is administered in a daily dose of the 2,5-dihydroxybenzenesulfonic compounds of formula (I) of <500 mg.
